

# 1130 Optical Module

## Overview

00112022302 Amphenol Terminals Module 1130 With inserted diodes 1 N 4007 for contacts #20 datasheet, inventory & pricing. 5 V integrated modulator driver and limiting amplifier with transmit and receive clock and data recovery (CDR) designed to operate between 9.7 Gbps without the need for a reference clock. Optical and electrical loopback are included. CDR bypass mode can be used. Customized 1130 nm Semiconductor Optical Amplifiers (SOA) engineered for your needs. High stability, wavelength precision, and full in-house production ensure top performance and flexibility across all diode types. The PL-FP-1130-D-A81-SA-FBG is 1130nm pump laser modules uses a number of revolutionary design steps and the very latest material technologies to significantly improve scalability of the production process. You will be connected with Innolume by email with your request. The transmit path consists of an adjustable input equalizer for.
