

Air duct runs through cable tray

Overview

The placement of cables, ducts, and conduits can be done using cable trays – for both outside plant (OSP) and interior spaces (ISP). This allows cables and ducts to be installed quickly and readily accessed for maintenance, adding more cables/ducts, or fast. Section 318-4 Uses Not Permitted states that “Cable tray systems shall not be used in environmental air spaces except as permitted in Section 300-22 to support wiring methods recognized for use in such spaces. The wiring methods allowed under Section 300-22 that utilize cable tray must follow the. A cable tray is a mechanical support system that acts as the backbone for a building's electrical and data infrastructure. It is designed to carry and manage insulated electrical cables for power, data, communication, and control systems. Think of it as the skeletal framework for the building's. Cable tray (or cable ladder) systems are a popular alternative to electrical conduit systems, as they have an outstanding record for dependable service, design flexibility and cost savings in commercial and industrial applications. However, they are not interchangeable.
