

Function of blind mating fiber optic connectors

Overview

- **Fiber Optic Blind Mates:** Designed specifically for optical signal transmission, these connectors ensure secure and reliable connections in sensitive fiber optic systems. All our connectors can be blind mated – Fischer Core, Fischer UltiMate™, Fischer MiniMax™, Fischer FiberOptic, Fischer Freedom™ –, so mating is never a problem even when you can't. Optical backplane connectors allow the connection of optical fibers through blind mating interfaces in similar fashion to electrical backplane connectors. They are constructed with a self-aligning feature that ensures a correct mating position on their own. The Floating Mate Connector Series is a compact, high-current floating blind mate connector system that combines power and signal contacts in a single, hybrid interface. Engineered around proven RADSOK® technology, it delivers up to 120 A and 1,000–1,500 VDC capability in misalignment-tolerant. A blind mate connector is a type of electrical connector that has a mating action that happens when sliding or snapping the plugs, without requiring wrenches or other tools.
