

Galvanized cable trays and iron conduits for electrical wires

Overview

A GI cable tray (Galvanized Iron Cable Tray) is a structural system that protects, routes, and supports electric wires and cables in industrial, commercial, or even infrastructure projects. ABB designs and manufactures cable tray systems, including perforated tray, cable ladder, channel tray and strut (metal framing), directly from production facilities in Canada and Saudi Arabia. At Hazquip Solutions, we offer a comprehensive range of cable. Heavy duty cable trays and cable ladders are manufactured from pre-galvanized or hot-dipped galvanized sheet metal, designed to meet ideal environmental working conditions for indoor and outdoor use in commercial or industrial environments with high cable density. Manufactured from premium-grade steel, these conduits undergo a rigorous hot-dip galvanization process, ensuring exceptional resistance to corrosion.
