

Highway Fiber Optic Cable Laying Project

Overview

The Transport Fibre Network project to deploy fibre optic cables along key national highways. Spanning thousands of kilometers, the aim of this project is to enable smart highways, improve traffic management, enhance real-time surveillance, and support emergency response systems. It forms a critical backbone for modern communication networks across both urban and rural environments. Project success depends on careful planning, precise installation practices, and proper. Geospatial Net is your one-stop shop for design, planning, survey, as-built documentation, GIS and CAD system design, data analytics, and system integration. Our expertise ensures properly planned network, and up to date documentation for the fiber infrastructure, making future maintenance. In an era driven by high-speed internet, 5G network expansion, nationwide Fiber-to-the-Home (FTTH) rollouts, and smart city infrastructure, underground fiber optic cable installation has become the unshakable backbone of global digital connectivity. 2 meters (3-4 feet) deep to reduce the likelihood of accidentally being dug up.
