

It is necessary for households to connect to fiber optic cables

Overview

Fast and stable connection is a basic necessity in every household today. The solution is fiber optic internet, which works differently than regular cables and offers greater reliability to users. In mid-2024, only 23 percent of households were connected to the fibre network (homes connected), and only 11 percent had booked a fibre connection. Why is the expansion going so slowly?

What challenges need to be overcome?

And above all, what solutions can be used to accelerate the process?

To. This applies even if the benchmark used is not the actual desired connection to the fiber optic network, but "Homes Passed": This means that a household is considered to be "supplied" even if the fiber optic cable is not laid to the apartment or house, but the property is at least located in a. The FTTH Council Europe aims at advancing ubiquitous full fibre-based connectivity to the whole of Europe, with the vision that fibre connectivity will transform the way people live, do business and interact, connecting everyone, everything, everywhere. In an FTTH network, fiber cable is used over the "last mile" in place of lower bandwidth DSL and coaxial wires. Once you understand the basic concepts, you can check out my Recommended Equipment section toward the bottom of the. FTTH refers to the deployment of fiber optic cables directly to individual homes, providing high-speed internet access and other advanced services.
