This chapter revises the methods and techniques used for live line work on a compact line, the tools, the theory, the control of overvoltages and the experimental practices used by different utilities around the world, analysing the differences between HVAC and HVDC lines and other considerations. The forerunner to this HV Live Work Manual was introduced in 1995 when Benchmark Power from Queensland was contracted by the then Hydro-Electric Commission to prepare a Document suitable for training personnel in Glove and Barrier Live Work procedures. Associated with this training was a shortened. This national occupational standard is about live line operations and procedures in the electricity power utilities environment.
