

# Price per kilometer for directly buried optical fiber cable

2. Imported design is convenient for expansion.

The design of two inlets saves space and allows for rear line entry.

## Overview

Total: around \$22,000-\$35,000 per km. Spec: mixed aerial and underground sections, higher fiber count. A simple 1-core FTTH drop cable costs around \$0. Pre-terminated assemblies and patch cables incur higher costs due to factory termination, with prices varying by connector type and the number of. The per-km estimates assume a standard 288-fiber backbone with conventional trenching or aerial ducting, plus common protections. Below is a structured view of how a per-km price is assembled. Typical design features include: Because of these added protections, direct burial cables are structurally different and more expensive than standard outdoor duct cables. The cost of fiber optic cable per kilometer can vary significantly based on a variety of factors, including the type of fiber optic cable, the geographical region, the installation environment, and the specific requirements of the project.
