

# Recommended switches that can connect to fiber optic cables

## Overview

When selecting a fiber optic network switch, prioritize models with SFP+ or SFP28 slots for high-speed connectivity, low latency, and support for both single-mode and multi-mode fiber—ideal for data centers or enterprise networks requiring reliable, long-distance transmission <sup>1</sup>. If you have multiple Ethernet switches that need to be connected over long distances, fiber is obviously a preferred choice. It can provide significantly higher bandwidth and carry more data. VERSITRON manufactures a wide range of fiber optic switches that provide links for your 10Base, 100Base, 1000Base Gigabit, and 10 Gigabit networks simultaneously. Various port sizes are available ranging from 4 up to 52 ports. We offer solutions that provide seamless transmission and conversion. A fiber switch is a critical component in modern networking that manages the flow of data across fiber-optic cables. They are used in a wide range of applications, including telecommunications, data centers, industrial automation, and military and aerospace.
