

# Relay Protection Custom Order

## Overview

With ABB's interactive Product Selection Tool (PST), you can request a quotation for protection relays online in a flash. The modular e-business platform is the one place where you will find most of the needed functionality to take your daily power distribution protection and control. SEL relays detect faults and other abnormal conditions in electric power systems and initiate protective actions to maintain system stability and safety. You simply select your product, create a unique order code using the intuitive and foolproof product configurator, add it to the shopping cart and press the 'Request Quotation'. The POWERSAVE-TAB-DI08 is a protective and control device with 8 digital inputs and outputs designed for use in TAB cabinets and medium-voltage systems. It offers the following protection functions: directional/non-directional overcurrent protection, ground-fault protection, undervoltage and surge. Relay protection plays a critical role in ensuring the safe and reliable operation of electrical power networks. It is responsible for detecting and isolating faults that occur within the network, thereby preventing damage to equipment and minimizing disruptions to power supply. The small number of variants translates into easy ordering, set up, use and maintenance. Although rich in functionality, REX610 represents a.
