

Service life of fiberglass cable trays in Ghana

Overview

Lifespan (15-20 years): The cable tray lifespan of fiberglass trays typically ranges from 15 to 20 years. They are highly resistant to corrosion, especially in environments like sewage treatment plants, chemical processing facilities, and offshore oil rigs. Beyond initial installation, they also deliver significant savings over the system's lifetime through reduced maintenance needs. This article will guide you through why. The fiberglass cable tray is a composite structural member with glass fiber as the reinforcing material and epoxy resin or polyester resin as the matrix, continuously formed through the pultrusion process. Its cross - section is usually designed as ladder - type, tray - type, or trough - type, with. Fiberglass Cable Tray is a durable, corrosion-resistant system used to support and organize electrical cables in industrial, commercial, and infrastructure projects.
