

# Should telecommunications companies use single-mode or multi-mode fiber

## Overview

Whether you're building a core network, upgrading a data centre, or deploying FTTx solutions, selecting between singlemode fibre (SMF) and multimode fibre (MMF) is a decision that directly impacts performance, scalability, and long-term cost efficiency. Despite both technologies transmitting data. Two of the most common cable types you'll hear about when implementing a fiber network are single mode and multimode fiber. They both have their sweet spot, and knowing which one fits your organization's needs can help you make the right choice. While single mode excels in specific applications, the multimode also offers unique advantages appealing to diverse networking needs. Learn how PHILISUN delivers precise fiber solutions for modern networks. In modern communication networks, fiber optic cables are essential for transmitting data at high speed and over long distances. </p><h2>Core Difference: Light Propagation</h2> <p>The fundamental distinction.
