

Singapore Fiber Bragg Grating Sensor Solution

Overview

This study proposes a flexible metal beam sensor with a fiber Bragg grating (FBG) mounted on the surface to measure the vibrational frequency. We present a sensor for measuring the vibrational frequencies on-site by placing the beam so that it makes physical contact with the. FBG sensing detection system is a Fiber Bragg grating technology, linear distribution point detection system based on measuring, by detecting the reflection center wavelength of the Fiber Bragg grating to obtain the actual object of strain, temperature and other parameters change. Abstract: Measuring vibrations is a common method of monitoring the integrity of structures and heavy machinery, that are subject to dynamic loads. They are easy to install, immune to electromagnetic interferences and can also be used in highly explosive atmospheres. 44 Million in 2025 and is projected to reach USD 10.
