

# Standards for the Construction Depth of Buried Optical Cables

## Overview

The short answer, based on general industry standards and the National Electrical Code (NEC), is that fiber optic cable is typically buried between 24 inches (60 cm) and 30 inches (76 cm) deep. However, simply hitting this depth isn't enough to guarantee your network survives. Factors like the. The Fiber Optic Association, Inc. Depths are established based on principles of. Burial depths are guided by international and regional standards, tailored to environmental and safety needs: The International Telecommunication Union (ITU) and Institute of Electrical and Electronics Engineers (IEEE) recommend a minimum depth of 0. 6 meters for urban areas and 1. This guide provides a comprehensive overview of industry. Underground cables are pulled in conduit that is buried underground, usually 1-1. 2 meters (3-4 feet) deep to reduce the likelihood of accidentally being dug up.
