

Telecom fiber optic cable shortage

Overview

The fiber optic industry is experiencing an unprecedented supply crunch. If you have sourced optical fiber g657 cables in the past month, you have likely encountered extended lead times, skyrocketing quotes, and the dreaded words: "out of stock. In Germany, there are several factors hindering the expansion. The biggest hurdle from the telecommunications companies' point of view is the complexity. She told Fierce the shortage impacts both ribbon and loose tube fiber. From a splicer's standpoint, ribbon cable is "much more user friendly and much more organized" because multiple fibers are bonded together. That makes ribbon ideal for data center deployments and situations where space is. As reported by Anna Gross for Financial Times (FT. com), the market intelligence firm Cru Group has now revealed that a worldwide shortage of fiber-optic cable has driven up product pricing and lengthened lead times on supply, casting a shadow over ambitious industry plans for advanced. The global demand for fibre optic cable continues to grow rapidly. It is driven by a combination of factors, but broadly speaking, it includes continuing fibre broadband rollouts, the expansion of 5G, and the building of more data centres needed to store and distribute the massive amounts of data. The fiber optic preform market specifically surpassed \$8.
