

The bottom of the distribution box is not sealed

Overview

The five causes are: a settled or tilted box, outlet clogs from solids carryover, root intrusion or crushed laterals, cracked or deteriorated box structure, and a saturated drainfield that mimics D-box symptoms. A septic distribution box (D-box) is a concrete or plastic junction that evenly distributes wastewater from your septic tank to all drainfield lateral lines. When it fails, symptoms include uneven wet spots in the yard, slow indoor drains, and sewage odors. Fixes range from jetting clogged outlets. When your distribution box shows leakage signs, you have your first clue which tells you that your drainage system beyond the D-Box is not functioning properly. Clogging If you've had your septic system for a while, you have probably run into clogs from time to time. When this critical component becomes blocked, wastewater may back up into the home, flood the drainfield, or contaminate surrounding soil and. The septic tank distribution box can have its own problems and cause a backup.

Article Content
