

# The incoming line is connected to a splitter

## Overview

The incoming telephone line is usually connected to the “Line” or “Telco” terminal on the splitter. The splitter has two ports: one for the DSL side and one for the POTS side. The DSL side is connected to the modem, which converts the digital signals into data that can be. A POTS splitter (also called a splitter) is installed on a telephone line that is connected to both data (high-frequency) and voice (low-frequency) devices. Signals intended for the router. A phone line splitter is a passive hardware device designed to allow multiple analog telecommunication devices to connect to a single telephone wall jack. This simple adapter shares the incoming telephone line signal, enabling you to simultaneously connect a traditional telephone, a fax machine, or. From the Provider engineer: ADSL source > Phone line box splitted into 2, 1 line connected to main phone (using 1 cable inside the box, so connected in parallel i guess).
