

# The optical receiver status indicator shows a red light

## Overview

FTTP ONT red light often indicates optical signal loss or fiber cable connection issues. First, check the fiber optic cable for bends, damage, or loose connections at the termination and error conditions. This error can also occur when the remote fixed blanking RUN/PROGRAM switch is in the off position. If the System fails the Daily Checkout problem. How do the indicators on Photoelectric Sensors operate?

There is a stability indicator (green) and an incident light indicator (red). A red or blinking light may indicate a power issue, such as a faulty power cord or a problem with the device. The star light is meant to be for the optical signal "PON is down due to LOF/LOS" may need to talk to your isp about what is going on, or if you are with Opticomm or another private provider may need to call them directly. Left to right: Power, Fiber (Optical Interface), Lan, Alarm 20K subscribers. How long have you been experiencing this red light issue?

Customer: It's been 5 hours; it's only the optical light inside the box on the wall.

## Article Content

Question regarding an AV Receiver's optical connection and cable

The lack of any red light indicates that either the cable or the TV are faulty or that you've not correctly configured the TV to use that output. Not having a red light has nothing at all to do with
