

The power distribution box in the building corridor keeps tripping

Overview

It can occur due to overloaded circuits, short circuits, or ground faults. Solution: Identify the Cause: Check if the breaker is tripping due to overloading. This often happens when too many devices are plugged into one circuit. For facility managers, electricians, and project owners operating overseas—from industrial plants in the Middle East to solar farms in Southeast Asia—these unexpected shutdowns mean costly downtime, safety risks. Distribution boxes are the unsung heroes of our electrical systems, quietly managing power until something goes wrong. When they start tripping, overheating, or making strange noises, it's more than just an inconvenience - it's your home's cry for help.
