

Unable to access Huawei s core switch

Overview

To enable the HTTPS IPv6 service function, run the `http ipv6 secure-server enable` command in the system view. Log in to the device through the console port, Telnet, or. The web system uses the built-in web server on a switch to provide a GUI through which you can perform switch management and maintenance. You can log in to the web system from terminals using HTTPS. If you fail to log in to the device through the web system, perform the operations in this section. Factory resetting a Huawei switch is one of those tasks every network engineer eventually faces—whether you're locked out due to a forgotten password, re-deploying refurbished units, troubleshooting unstable configurations, or preparing devices for a new branch rollout. It only shows `<SW-L2-01>` any command I type it gives error unrecognized command found at '^' position. So what should you do if this password is forgotten?

All of our Huawei switches have the same basic configuration with web access. One of them (S6700-24-EL) refuses to allow logging into it via https service. I did as much debugging and digging as I could (given how abysmal I am at CLI) and here are my findings: Web login page loads as expected.
