## Overview

The PBB shall be bonded to building steel where accessible with a minimum size conductor of 6 AWG. Where a panel board for telecommunications is located in the same room or space as the PBB, that panel's ground bus or the enclosure must be bonded to the PBB. Choose the right box based on environment (indoor/outdoor), load capacity, and durability. Check for proper IP/NEMA ratings and material quality. This document is not intended as a substitute for a detailed study or operational and site-specific development or schematic plan. (1) Wiring method of distribution box 1) Generally, the incoming line of power distribution box adopts five wire system, i. three phase lines a, B and C (generally. Begin by determining the electrical load requirements and selecting an appropriately sized distribution box. Obtain necessary permits and ensure the installation location meets code. mm (minimum) in length on cable connection side as shown in the drawings. Select a well-ventilated and dry place to avoid poor heat dissipation causing equipment.
