

Wiring terminals in the lighting distribution box

Overview

Inside the box, you'll find things like circuit breakers, busbars, terminal blocks, and wires. These parts control and distribute the electricity to different circuits safely. A lighting circuit typically includes various types of fixtures, such as ceiling lights, wall sconces, and recessed lights. An electrical panel box, also known as a breaker box or electrical distribution panel, is the central hub for electrical power in a building. It is typically located in a basement, garage, utility room, or other accessible area. The following are some basic requirements for wiring: Select the appropriate wire: The appropriate wire specification should be selected according to the lighting load, and ensure that it meets the national. Every lighting system needs a cable from the mains to supply power to all the lighting points and a switch that can interrupt the supply to each individual point.
